

Represents the Master Key Server, all of the gateway nodes connect to the server to generate their key pairs and allow them to be responsible for their connected nodes.

Represents an IOT device, in this network the same device could act as a gateway or a node depending on how many nodes can connect to it and whether its connected to the Master Key Server.

## Example values saved after init:

Public Key: 36f028580bb02cc8272a9a020f4200e346e276ae664e45ee80745574e2f5ab80
